

Catalog No.: DNA-SC
Product Name: DNA Spin Columns
Size: 100/set

DESCRIPTION: DNA Spin Columns are silica membrane based centrifugal columns. They have been widely used in DNA purifications, such as plasmid purification, genomic DNA purification and DNA fragment recovery from agarose gel etc. They are the main components of the DNA mini-prep kits from different companies. In a standalone column format, its application covers from plasmid to viral and genomic DNA, from regular PCR purification to next generation sequencing sample preparation. The Spin Columns are compatible with a wide range of buffers from all brand names.

Specifications:

Format	DNA binding column and 2.0ml collection tube as one set.
Principle	Selectively DNA binding
Equipment	Microcentrifuge, Vacuum Manifolds
Binding Capacity	20 µg
Matrix / Construction	Silica-based / Polypropylene
DNase/RNase	None detectable

Storage: Stored at room temperature
