

Catalog No.: RNA-SC
Product Name: RNA Spin Columns
Size: 100/set

DESCRIPTION: RNA Spin Columns are silica membrane based centrifugal columns. They have been widely used in RNA purifications, such as total RNA and mRNA purification. These spin columns are also widely used for RNA impurity removal or RNA clean-up in applications like RT-PCR and gene expression study experiments. They are the main components of the RNA mini-prep kits. The Spin Columns are compatible with a wide range of buffers from all brand names.

Specifications:

Format	RNA binding column and 2.0ml collection tube as one set.
Principle	Selectively RNA binding
Equipment	Microcentrifuge, Vacuum Manifolds
Binding Capacity	20 µg
Matrix / Construction	Silica-based / Polypropylene
DNase/RNase	None detectable

Storage: Stored at room temperature
